

A SCREENING MODULE AND A SCREENING ASSEMBLY INCLUDING SUCH MODULE

ABSTRACT

A screening assembly framework includes a plurality of support members, each of which supports at least one securing element by which a screening module is secured to the support member. A plurality of spacer members are arranged intermediate the support members for retaining the support members at a predetermined distance relative to one another, at least certain of the support members and at least certain of the spacer members being demountably connected to one another to form a demountable underlying structure for an array of screening modules of the screening assembly.
